

Tête Allègre / Sofaïa circular trail

Basse-Terre Nord

vue depuis les crêtes (C.Lesponne)

Discover the rainforest and visit the site of Sofaïa with this challenging trail. On a clear day, the ridge stretch of the trail offers views of the Grand Cul-de-Sac Marin.

Useful information

Practice : Walking

Duration : 6 h

Length : 14.3 km

Trek ascent : 876 m

Difficulty : Difficult

Type : Loop

Themes : River and waterfall

Trek

Departure : From the "La Muraille" forest road

Arrival : On the "La Muraille" forest road

Markings : — PR (short hike network)

Cities : 1. Sainte-Rose

2. Deshaies

3. Pointe-Noire

Altimetric profile

Min elevation 251 m Max elevation 754 m

Hiking trail colour: yellow

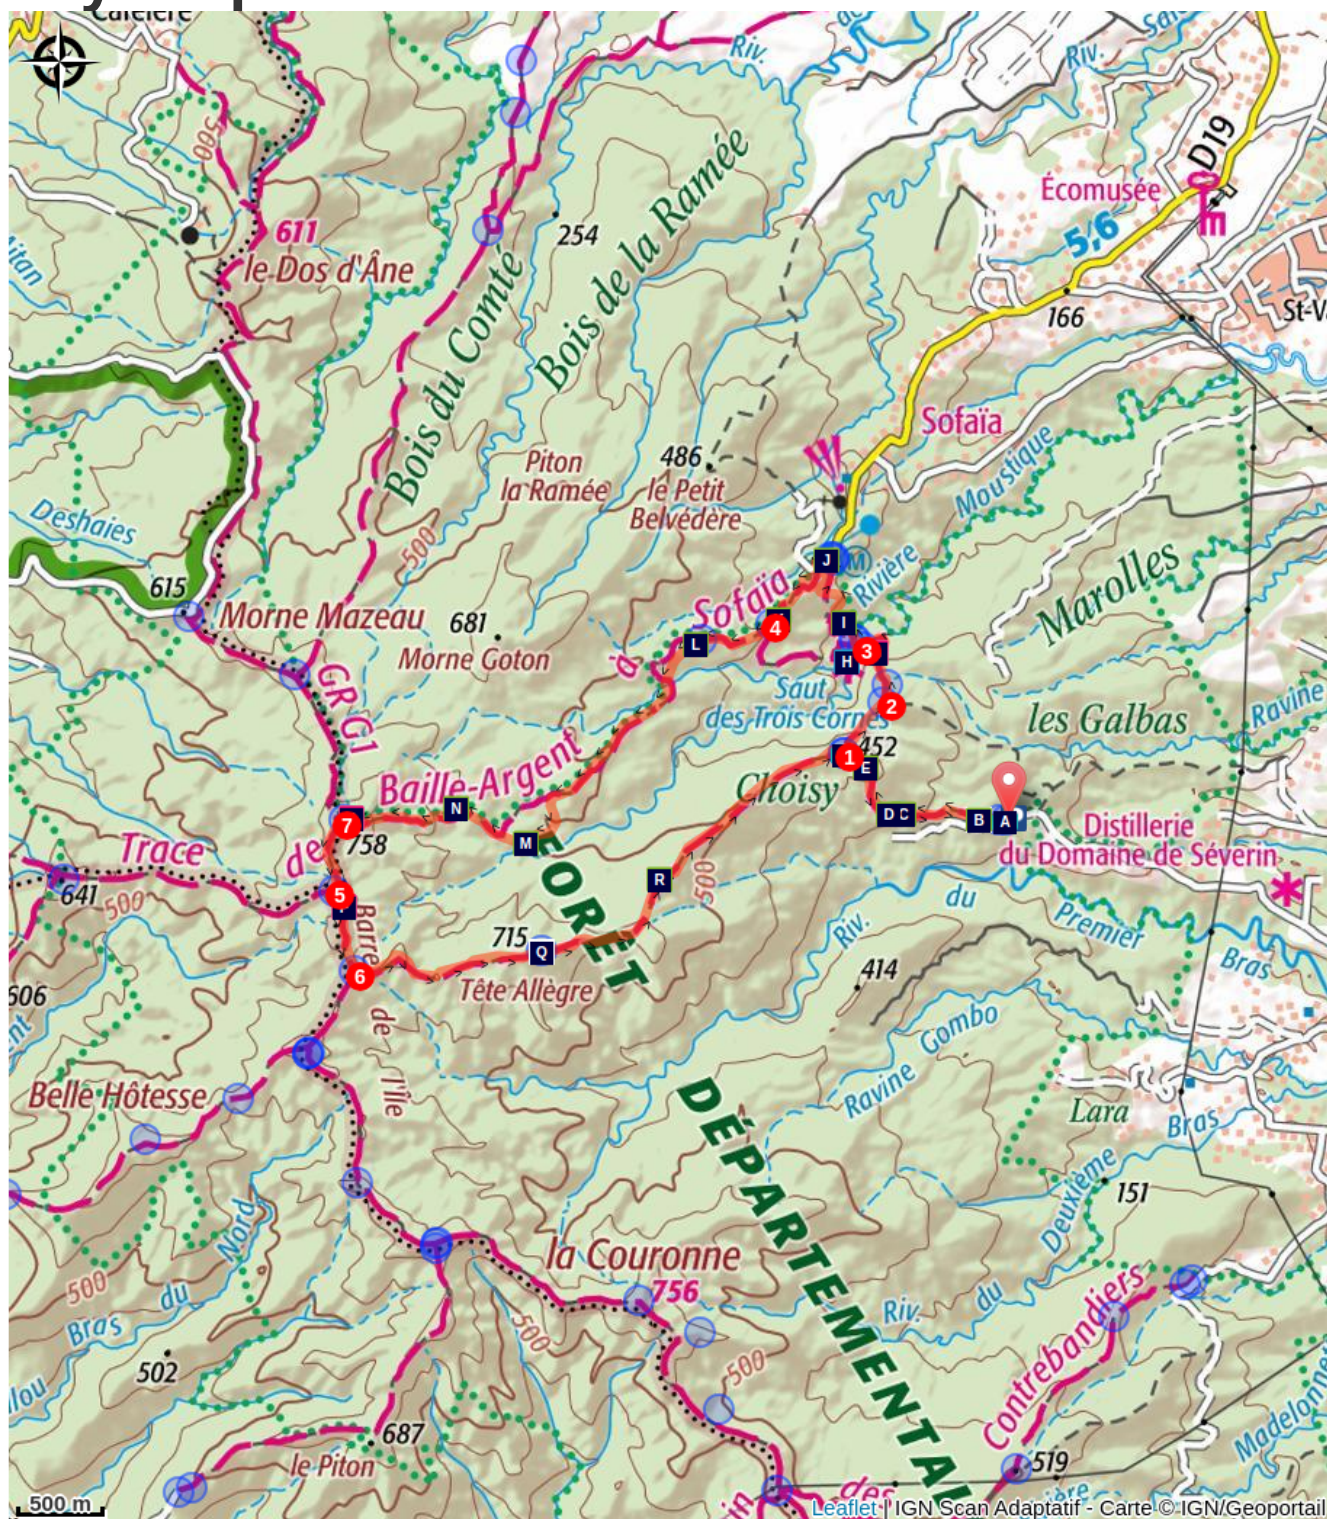

Start out on the path that heads towards "Tête Allègre". Keep going until you reach the intersection (point 1). Turn right towards "Sofaïa" and then keep going in the same direction (point 2). Go downhill until you reach the Moustique river. You can then turn left (point 3) to keep going until Saut des Trois Cornes.

Alternatively, or later on, cross the river (point 3) to reach the other side.

Head up until you reach the small intersection. Turn right towards Sofaïa on the old botanical path. You should then reach the Sofaïa parking area *[Here you can use the outdoor showers, located below the car park. These showers use the hot and sulphurous waters of Sofaïa].*

Continue the hike by heading on the paved road, towards "Baille-Argent". Keep going in this direction until you reach the intersection (point 4). Go uphill steadily until you reach la Barre de l'Île. Keep going (point 7) to the south towards "Belle Hôtesse" and then straight on (point 5) towards "Tête Allègre / Choisy". Continue in this direction (point 6), and start the descent towards the finish.

All useful information

AdVICES

This route is hazardous when it is raining. Do not plan a hike if it has been raining the day before or if bad weather is forecast. If water levels are rising, do not try to cross the river. Wait until they return to normal.

Extra care should be taken in this natural environment, as Guadeloupe is prone to natural risks. For the benefit of all hikers, responsible behaviour is requested.

Please note : the parking and swimming areas are not supervised.

How to come ?

Transports

En Guadeloupe, 2 applications pour le covoiturage :

Déposé : <https://depoze.fr>

KAROS : <https://www.karos.fr>

Access

GPS coordinates of the start point : Lat : 16,27685 N - Long : 61,71681 W.

On Route RN2, between Lamentin and Sainte-Rose : at the roundabout of La Boucan, turn towards "Cadet" and "Bonne Mère". Then follow the signs that point towards Domaine de Séverin. Once you have reached le Domaine, go past the parking area and head left on the road that goes round it. Then carry on for around 3km, first on the road bordering the sugar cane and pineapple fields and then to finish on the La Muraille forest road. You then reach the small parking area at the start, located next to the hike information board.

Advised parking

Small site to park your car along the "La Muraille" forest road.

Accessibility

Signage

Nouveau dispositif "balises de secours" en Guadeloupe (04.2025). En vue de faciliter les opérations de recherche et de secours, l'ONF Guadeloupe a mis en place un dispositif de balises de secours sur plusieurs sentiers de randonnée.

Ce dispositif a pour objectif d'aider les randonneurs en difficulté à se localiser et d'améliorer l'action des secours grâce à un système de repérage standardisé.

Les sentiers équipés de ces nouvelles balises sont : le Pas du Roy et le Chemin des Dames (zone Soufrière), Carmichaël et la Grande Découverte (Saint-Claude), le saut des Trois Cornes, ainsi que la boucle de Tête Allègre (Sainte-Rose).

On your path...

Starting panel (A)

You will see the panel introducing two neighbouring trails: the Saut des Trois Cornes trail and the Tête Allègre trail. The start of the Galbas circuit is shared by both of these trails. Please note, this trail is not mentioned on the starting panel.

On the way, you will see signs guiding you along the Galbas trail.

Vanilla (B)

There are more and more agroforestry projects, and vanilla is one of the main crops, with half of the vanilla farmers working as franchisees. The ONF authorises franchises or "concessions", which are drawn up to respect technical and environmental provisions related to forest management.

Vanilla is an orchid that likes shaded, cool and humid environments. Growing it is tricky and time-consuming. Since there are no pollinating insects in the archipelago, pollination is carried out by hand.

Attribution : PNG

Candlewood (C)

Candlewood (*Dacryodes excelsa*) can grow up to 35 metres in height. From the trunk and roots a white sap with a strong smell of resin seeps out when cut. The sap is traditionally used as incense or to light fires, since it burns very slowly, whatever the humidity level. It is believed it can chase away evil spirits. Candlewood trunks were used by native Americans to make canoes (kanawa), and in many tropical countries today, such as Dominica, the trunks are used by coastal populations to make fishing boats. Wood pigeons are fond of the seeds from the tree.

Attribution : PNG

Haya blanca (D)

Guatteria caribea is a very straight tree, often with more than one trunk. It has blackish bark and dangling branches. The tree's berries are pulpy and black. The bark is used to make rope, and the wood to make ships' masts. It is still used today to make traditional sailing boats in Guadeloupe (kanot).

✿ "Bwa Bandé" (E)

Richeria grandis is known as "Bwa Bandé" locally. This is a very tall species that can be recognised with its tough leaves and reddy-brown bark. Its fruits are very specific, forming little capsules that look like green raisins. They mass together in large numbers on the branches. The "bwa-bandé" is unfortunately often the victim of illegal cuttings, since its bark is renowned as an aphrodisiac. The wood was once used to make frameworks and in carpentry

✿ Creeper plant (I)

You can see a magnificent creeper plant not far from the path.

Attribution : Céline Lesponne / PNG

✿ Bamboo (J)

A member of the Poaceae family, bamboo is more closely related to grasses than to trees. Made up of a woody, hollow stalk, its stem grows extremely quickly. It is both a highly resistant and invasive species in Guadeloupe and concerted efforts are being made to put it to best use in crafts and construction.

Attribution : Céline Lesponne / PNG

✿ West Indian Mahogany (K)

The West Indian Mahogany (*Swietenia mahagoni*) is a robust species native to Ispagnola. This dry forest tree was initially planted as an ornamental feature for houses, but then spread elsewhere. Despite the wood being of extraordinary quality, it grew too slowly to be used in reforestation. When degraded forests needed to be revived and enriched, foresters turned to this tree for the task.

✿ Simarouba amara (L)

Simarouba amara is a remarkable tree from the dense forest of Guadeloupe.

Attribution : Céline Lesponne / PNG

✿ The Yucca Plum Pine (M)

Podocarpus coriaceus is also commonly known as the Yucca Plum Pine. It is a member of the Podocarpaceae family. Closely related to conifers, it is an average-sized tree, measuring around 10-16 metres. Its leaves – dark green on top – have a leathery quality that is reminiscent of the common oleander. They have a span of 6-15 cm with no discernible stalk. While its flowers are discreet, its brown-coloured seeds in their red floral buds are particularly eye-catching. It has a thin layer of bark. This species is found throughout the West Indies and flowers mainly in December and January.

Attribution : Céline Lesponne / PNG

✿ "Bwa bandé" (N)

Richeria grandis belongs to the Phyllanthaceae family. It is a large variety, distinctive for its tough leaves and reddish-brown bark that so often falls victim to rogue extraction. Also known as bwa bandé in Créole, it is renowned for its aphrodisiac qualities. Its wood is used as timber or in carpentry. It has very distinctive, green, grape-like fruits which form small pods and form copiously on its branches.

✿ The Sierran palm (R)

The Sierran Palm (*Prestoea montana*) is a member of the Arecaceae family. Despite its size, it is in fact a palm tree. Like ferns, it does not have a trunk but a stipe. It can live in both hygrophilous forest, where it can reach a height of ten metres, and at altitude, where it does not grow beyond two metres.
